

## **Benefits of using the Magic Shoe Cover Dispenser**

### **Safety / Ease of Use**

The Magic Dispenser's unique, sturdy design allows workers to put on shoe covers quickly, easily and safely. There is no bending or stooping, and no longer will you find workers cutting corners and putting themselves at risk of falling by balancing precariously on one foot or leaning against a wall.

Consider the cost of ONE worker's compensation claim, AVOIDED, when comparing the KineticButler to your current shoe cover solution.

### **Increase Compliance**

Where a clean/sterile environment is required, you desire nothing less than 100% compliance from your workers when it comes to using shoe covers. After all, the very integrity of your product is at stake. However, most workers believe that using shoe covers is a chore that slows them down and gets in the way of doing their job. Then there are those whose physical limitations make putting on shoe covers difficult, if not impossible.

The Magic Dispenser will help you achieve 100% compliance more easily by proving a quick, easy, safe and some might say FUN method of putting on the shoe covers. 100% compliance leads to...

### **Increase Productivity**

Industry reports indicate that it takes workers an average of 35 seconds to put on a pair of shoe covers. Using the Magic Dispenser, application time is reduced to only 5 seconds; an 85.7% reduction. This is time that can be used for productive tasks.

To put this in perspective, for every 1,000 pairs of shoe covers used, EACH MONTH, the Magic Dispenser helps you recapture 500 minutes (8.3 hours) of productive labor in your operation. That is a \$250 savings, at \$30/labor hour, per 1,000 pairs, per month!

### **Reduce Costs Due to Rework and Contamination**

Whether it's a scratched floor on a construction project or a stray contaminant tracked into the lab on a worker's shoe, the costs of having to do a job twice can be astronomical. Many of our customers have realized cost reductions that exceed their total expenditures for shoe covers.
